

Interoffice Memo

Environmental
Protection Agency

To: Fred Myers through Ken Schultz, DERR-CDO
From: Michael Bondoc through Linnea Saukko, DDAGW-CDO
Date: March 29, 2010
Facility: Granville Solvents, Inc. (Licking County) #145-0353
Subject: Granville Solvents Superfund Site 2009 Annual Ground Water Monitoring Report dated February 2, 2010

INTRODUCTION

The Division of Emergency and Remedial Response (DERR) requested that the Division of Drinking and Ground Waters (DDAGW) review the *Granville Solvents Superfund Site 2009 Annual Groundwater Monitoring Report*. The report was received on February 11, 2010. The review was conducted to determine if it is necessary for the Granville Solvents Site Management Group, LLC (GSS Group) to resume groundwater treatment activities based on the criteria outlined in the 2005 "post-shutdown" contingency plan approved by the USEPA.

COMMENTS

DDAGW has no comments on the report referenced above.

CONCLUSIONS

Based on the March and September 2009 groundwater data, the conditions for restarting the groundwater treatment system as defined in the contingency plan were not met. Concentrations of VOCs identified as constituents of concern were not detected or did not exceed MCLs in the compliance wells (GSSMW-8, GSSMW-9 or GSSEW-1). Concentrations of VOCs identified as constituents of concern did not exceed twice the MCLs in leading edge wells (MW-07D or MW-08). Well locations are shown on Figure 1.

The GSS Group reported increasing concentration trends of one or more VOCs over the past five years in samples collected from GSS-MW15, MW-02D and MW-04D. The VOC concentration trends should continue to be evaluated to determine if the plume is expanding and/or migrating toward the Village of Granville wellfield. The GSS Group should continue the monitoring activities at the GSI site as required by the post-shutdown ground water monitoring and contingency plan.

Please contact me if you have any questions.
